

[Job Opening]

---

With its innovative hardware and software products, **Roboception GmbH**, based in Munich, Germany, is a pioneer in 3D sensor technology: We give the robots eyes - and hence deliver key elements of our customer's most forward-looking automation solutions.

In order to strengthen our development team, we are looking for

## **Software Developers** (d/f/m), full time

The tasks include:

- Development of methods for 3D object recognition of known and unknown objects, using machine learning and/or traditional image processing approaches
- Performance optimization for software modules w.r.t. picking, placing and tending
- Support of the product owners with the analysis of customer requirements and the creation of MVPs
- Support of the sales team with feasibility studies and technical support for customer inquiries
- Presentation of development results during internal reviews and customer-facing
- Maintenance and documentation of interfaces and software products for customers and developers

We require:

- Enthusiasm for innovative software products and development-as-a-team
- Degree in engineering or computer sciences (or comparable) and a few years of professional experience
- Good knowledge of English, good knowledge of German a plus
- Very good knowledge of C++ , Python, ROS
- Good knowledge of software development environments such as Gitlab and software development in Linux
- Experience in agile software development (SCRUM)
- Good knowledge of the development of algorithms in the 2D/ 3D image processing domain
- Good knowledge of machine learning approaches and their application in robotics
- A self-reliant and responsible way of working, joy in the creation of customer-oriented software products and a feel for intuitive user interfaces
